*for your happy home life*

**Home building** is a complicated process in which a mistake means a loss in time, money and satisfaction. To build a satisfactory home—with no after regrets—we strongly recommend the use of carefully made, accurate blueprint working plans. It is essential, safe and economical to first construct the house on paper. Accurate plans and specifications must be submitted to a loaning agency for its approval when you apply for a mortgage loan on a new home.

**Experienced designers** in house planning and construction and an architectural department composed of skilled draughtsmen, architects, and engineers are the elements upon which plans of the utmost accuracy and completeness in regard to design, strength, durability, and comfort and home conveniences are created.

**Blueprint plans** include the following complete drawings for each design: Basement or foundation plan, first floor plan, second floor plan, front elevation, right side elevation, left side elevation, rear elevation, sections and detailed drawings, all necessary framing plans. All working plans are drawn to standard scales. Blueprints for each design are available.

**Reversed plans** of homes as illustrated in this book are available if required.

**Blank specifications and a building contract form are included.**
